

Installing Node.js and Tailwindcss

- step-1 Install Node (Node install krne pe node and npm[node package manager] dono install ho jaenge.)
To check node installation
Open Terminal
`$node -v`
`$npm -v`
- If there is any problem check
edit the system environment variables > Environment Variables... > System variables > C:\Program Files\nodejs\ (present or not), not then add
- step-2 Create a new project folder > open in VS Code
Open Integrated Terminal
`$npm init -y`
`$npm install -D tailwindcss@3 postcss autoprefixer vite`
`$npx tailwindcss init -p`
- We will have these files/folders in project folder - node_modules folder, package-lock.json, package.json, postcss.config.js, tailwind.config.js
- step-3 Install Tailwind CSS Extension
- Step-4 open tailwind.config.js
In its content add a "*"
content: ["*"]
- Step-5 Open package.json, write start script in its scripts
"scripts": {
 "test": "echo \"Error: no test specified\" && exit 1",
 "start" : "vite"
},

Step-6 Create a main.css file , add these three lines in it

@tailwind base;

@tailwind components;

@tailwind utilities;

Step-7 Link the main.css file to index.html

```
<link rel="stylesheet" href="./main.css">
```

Step-8 Open inetegrated Terminal

```
$npm run start
```

Copy Local Link & Open it

Local: <http://localhost:5173/>

To exit of the server

```
$Ctrl + C
```
